

MD. HASAN JARIF BIN MONOHOR

Cybersecurity | SOC & Network Security

01537291547 | hasanjarif12538@gmail.com | Dhaka, Bangladesh | LinkedIn | Github

PROFESSIONAL SUMMARY

Cybersecurity enthusiast and fresh Computer Science and Engineering graduate with hands-on, self-driven experience in cybersecurity, including SIEM log analysis with Wazuh, endpoint detection and response (Kaspersky Next EDR), firewall and access-point administration (Sophos). Completed a paid internship applying these skills in a live environment. Actively practices defensive security on Hack The Box. Also builds full-stack web applications (MERN stack) to support and automate security workflows, such as a custom login-monitoring dashboard integrated with Wazuh.

TECHNICAL SKILLS

Security Tools & Platforms: Wazuh (SIEM, log analysis, file integrity monitoring, vulnerability detection, active response), Kaspersky Next EDR (endpoint configuration, policy management, threat detection & response), Sophos Firewall, Sophos Access Point

Networking & Cloud: Cisco networking (VLANs, switching, routing), network segmentation design, AWS networking fundamentals (VPC, subnets, routing, connectivity)

Security Practice: Hands-on practice on Hack The Box, Try Hack Me (**Hack The Box, Try Hack Me**)

Programming Languages: Python, Bash, C, C++, JavaScript

Security Tools and Operating System: Wireshark, Nmap, Windows, Linux

Web Technology (MERN): Node.js, Express.js, React, MongoDB, MySQL, HTML, CSS

PROJECTS

Self-Hosted Wazuh SIEM Lab

- Deployed a Wazuh server and enrolled multiple agents to collect and centralize log data.
- Analyzed logs to identify anomalies and understand system/network activity in near real time.
- Configured file integrity monitoring, vulnerability detection, and active response rules to strengthen the lab's security posture.

SOC Log Analyzer _Python|Cyber Security-- Github

- Developed a Python-based security log analysis tool to parse and analyze system/security logs for suspicious activity.
- Implemented automated detection and identification of security-relevant events to support SOC-style monitoring and investigation.
- Designed the tool to organize analyzed log data and present meaningful security findings for easier incident investigation.

Campus Network Design & Implement(Cisco Packet Tracer)--Github

- Designed and implemented a multi-campus enterprise network, connecting multiple faculties and departments.
- Configured Vlan, s inter-vlan routing and switch port assignments to enforce logical network segmentation between departments.
- Implement DHCP, port security to improve network management and security.
- Configured and tested switches, routers, access points, and end devices validating connectivity and network functionality across the campus.

INTERNSHIP EXPERIENCE

Cybersecurity Intern -- Goinnovior

2026 (May- August)

- Configured Sophos Firewalls and Access Points for secure network access and perimeter defense.
- Used Kaspersky Next EDR for endpoint configuration, policy management, and threat detection.
- Used Wazuh for log collection, monitoring, and security event analysis.
- Learned AWS networking fundamentals, including subnets, routing, and connectivity.

EDUCATION

Bachelor of Science in Computer Science and Engineering (Graduated)

Daffodil International University --Dhaka, Bangladesh| 2022-2026 | CGPA: 3.42 / 4.00

Higher Secondary Certificate (HSC) in Science

2019- 2021

Adamjee Cantonment College--Dhaka, Bangladesh| 2019-2021 | GPA: 5.00 / 5.00

PUBLICATIONS--MediBot

MediBot:Smart Line_Following Medicine Delivery robot for Efficient Hospital Medication Distribution

2025 international Conference on Quantum Photonics, Artificial Intelligence, and Networking--(QPAIN), 2025
